To locate metal drums suspected of being buried near Dead Creek and surrounding areas near Sauget, Illinois. Ground penetrating radar may have to be utilized in addition to magnetometers and other more conventional methods. A meeting has been scheduled with Illinois EPA in Springfield on February 19, 1981 to establish procedure to locate the suspected buried drums.

Priority 1 ranking because of high potential for funding immediate remedial action with Superfund money if project objective is met by desired completion date.
